

**Attachment to AMENDMENT PURSUANT TO 37 C.F.R. §1.116**  
**dated November 27, 2001**

**Marked-up claims 1, 5, 14, 16 and 25**

1. (Twice Amended) A method for inerting an aircraft fuel tank, said method comprising the steps of:

- (a) contacting compressed air with one or more first membrane modules at conditions effective to produce a first nitrogen-enriched air stream;
- (b) introducing said first nitrogen-enriched air stream into said fuel tank during periods of low demand for nitrogen-enriched air;
- (c) contacting compressed air with one or more second membrane modules at conditions effective to produce a second nitrogen-enriched air stream; and
- (d) introducing said second nitrogen-enriched air stream into said fuel tank during periods of high demand for nitrogen-enriched air,  
wherein said first membrane modules have a lower O<sub>2</sub> permeance and a higher O<sub>2</sub>/N<sub>2</sub> selectivity than said second membrane modules, and  
wherein at least one of said first nitrogen-enriched air stream and said second nitrogen-enriched air stream is introduced directly into the fuel in said fuel tank at conditions effective to liberate at least a portion of dissolved O<sub>2</sub> in the fuel.

5. (Twice Amended) The method according to claim 1, wherein said first nitrogen-enriched air stream is introduced directly into the fuel in the fuel tank to liberate at least a portion of dissolved O<sub>2</sub> in the fuel.

**Attachment to AMENDMENT PURSUANT TO 37 C.F.R. §1.116**  
**dated November 27, 2001**

**Marked-up claims 1, 5, 14, 16 and 25**

14. (Twice Amended) A method for inerting an aircraft fuel tank, said method comprising the steps of:

- (a) contacting compressed air with one or more first membrane modules at conditions effective to produce a first nitrogen-enriched air stream;
- (b) introducing said first nitrogen-enriched air stream into said fuel tank during cruising;
- (c) contacting compressed air with one or more second membrane modules at conditions effective to produce a second nitrogen-enriched air stream; and
- (d) introducing said second nitrogen-enriched air stream into said fuel tank during ascent or descent or both,

wherein said first membrane modules have a lower O<sub>2</sub> permeance and a higher O<sub>2</sub>/N<sub>2</sub> selectivity than said second membrane modules, and

wherein at least one of said first nitrogen-enriched air stream and said second nitrogen-enriched air stream is introduced directly into the fuel in said fuel tank at conditions effective to liberate at least a portion of dissolved O<sub>2</sub> in the fuel.

16. (Twice Amended) The method according to claim 14, wherein said first nitrogen-enriched air stream is introduced directly into the fuel in the fuel tank to liberate at least a portion of dissolved O<sub>2</sub> in the fuel.

**Attachment to AMENDMENT PURSUANT TO 37 C.F.R. §1.116**  
**dated November 27, 2001**

**Marked-up claims 1, 5, 14, 16 and 25**

25. (Twice Amended) A system for inerting an aircraft fuel tank, said system comprising:

- (a) one or more first membrane modules for separating compressed air into a first permeate stream comprising oxygen-enriched air and a first retentate stream comprising nitrogen-enriched air;
- (b) a first conduit for conveying said first retentate stream into said fuel tank during periods of low demand for nitrogen-enriched air;
- (c) one or more second membrane modules for separating compressed air into a second permeate stream comprising oxygen-enriched air and a second retentate stream comprising nitrogen-enriched air;
- (d) a second conduit for conveying said second retentate stream into said fuel tank during periods of high demand for nitrogen-enriched air; and
- (e) a third conduit for introducing at least one of said first retentate stream and said second retentate stream directly into the fuel in said fuel tank to liberate at least a portion of dissolved O<sub>2</sub> in the fuel,

wherein said one of more first membrane modules have a lower O<sub>2</sub> permeance and a higher O<sub>2</sub>/N<sub>2</sub> selectivity than said one or more second membrane modules.
